

DogShowApp

Objective: to build a website where people can volunteer to work at an event

Frameworks used:

Angular2

JQuery

Bootstrap

Most of the requirements asked for this task are on the main “home” page.

- “Home” page

- A navigation menu

- Image Slider with pictures of the “event”

- Introduction of event

- Form which can pass values to console

- Radio buttons

- Check Boxes

- Text Field

- Proper Form Validation

- “Join Now” button

- “About” page

- Short description of the dog breed

- Information about where the even takes place

- Map of where the event will be held

- “Volunteer” page

- Similar to ‘Home” page

Form to become a volunteer

- "Contact Us" page

Form to submit information and comments

Comments on the ChatBot:

It performed superbly, I found all routes taking me to the right place with the right answers. Easy, short, straight to the point and ending with the right information for the user.

Three things that I can recommend:

I found the heart emoji a bit redundant. Perhaps a random emoji depending on the random question.

Perhaps, a bit more of witty when answering although sticking with the development field but with a bit of humor

In my opinion when the chatbot is answering in a combo, it answers a bit too fast. Give the user an extra "second" to read and continue feeding the information.
